BENEFITS

-

Target Areas for Improvement

“MQI has helped target specific areas for teachers to focus upon for improvement, rather than having them feel overwhelmed by trying to improve everything at one time.”

-Director of Curriculum

-

Use Video for Better Understanding

“The stock videos were definitely the most useful. Being able to show a strong example or at times a weak example (and build from it), was incredibly beneficial in helping the teacher to better understand the [example] and to understand what it looks like in practice.”

-Math Coach

-

Receive Ongoing Support

“This was my first math coaching experience, and I felt so well prepared! The initial training, check-in webinars, and calibration webinars were so helpful, as was the overall structure and communication.”

-Math Coach
